TARKETT LAMINATE

Installation & maintenance instructions

2-Lock / T-Lock
Product usage

- Tarkett Laminate flooring is not recommended for use in high humidity areas where the floor is usually wet (steam rooms, saunas)
- Tarkett Laminate can be used with underfloor heating

Recommended installation accessories

- 8 mm spacers (or installation springs)
- Foam underlay (We recommend our Tarkett Foam + our Tarkett PE-foil or our 3mm Tarkett Soundblock Foam with the integrated PE-foil)
- Skirtings, clipholders for skirtings and profiles for a perfect finish
- Please see our brochure or our website www.tarkett.com for the full range of accessories.

INSTALING LAMINATE FLOOR WITH UNDERFLOOR HEATING

Explanation and restrictions
Laminate flooring is suitable for installation on top of underfloor heating systems provided that the heating element is embedded into concrete or any other sub floor. Laminate flooring is not suitable for installation on top of underfloor heating foil installed on top of concrete or any other sub floor unless otherwise specified by the underfloor heating manufacturer. Surface temperature should never exceed 28°C.

Procedure
Installing laminate flooring on top of low temperature under-floor heating is possible provided that a specific heating procedure (in accordance to PN EN 13813 and DIN 18560 & regardless of the season) is followed before the damp proofing layer is put in place: set the temperature of your heating device at 25°C & let it run for 3 days. Increase your heating in steps of 5°C up to its max. temperature. Let it run continuously for 72 hours. Decrease the temperature in steps of 10°C until reaching a floor surface temperature of 18°C. Before, during & at least 3 days after the installation of your flooring, the floor surface temperature should be maintained at 18°C. Do not forget to install a vapour barrier, we recommend our 0.2mm Tarkett PE-foil.

Please check with your dealer & the floor heating system producer.

Recommended tools

- Vacuum cleaner
- T-square
- Tape measure
- Saw - table saw (fine tooth carbide tipped blade)/miter saw/circular saw/jigsaw
- Safety glasses and safety gloves

General preparation

ACCLIMATION
Tarkett Laminate Flooring must be allowed to acclimate to the temperature of the room in which it will be installed.

- Place the unopened cartons of laminate lying horizontally for a minimum of 48 hours before installation in the room in which they will be installed
- Do not remove the plastic wrapping
- Room temperature shall be a minimum of 15°C (59°F)
ROOM PREPARATION

• Carefully remove any existing wall skirtings and doorway transition profiles. If using quarter round skirtings, wall base skirtings do not have to be removed. Existing quarter round may be re-used or replaced with matching quarter round. The skirting must be of sufficient size to cover the 8 mm (5/16") expansion area around the perimeter of the floor.
• Leave at least 20 mm (0.79") between the surface of the flooring and the bottom of electric baseboard heaters to allow heat to circulate.
• Undercut door jambs and door moldings to allow the flooring to fit underneath. Use a scrap piece of flooring and foam underlayer as a guide.
• Sweep and/or vacuum subfloor to remove all dirt and debris.

IMPORTANT

A min. 0.2 mm vapour barrier PE foil shall be installed over all subfloors, except on wooden floor/construction. We recommend the use of the Tarkett Soundblock Foam which can reduce impact sound to 19 dB. Please check our catalogue or our website www.tarkett.com for more information.

Installation instructions

GENERAL INSTALLATION INSTRUCTIONS

• Begin laying planks on the left side of the starting wall and work to the right side. The tongue side of the plank shall face the starting wall.
• Place spacers (minimum 8 mm) between the short and long side of the planks and the wall.
• Press the short end of the next floorboard at an angle to the first one, then lay down. Complete the first row in the same manner. If the starting wall is irregular, scribe or trace the contour of the wall on the first row and cut.

For T-Lock installation, see drawings 1, 2 and 3, page 10

Please visit our website to see our video demo.

Preparation before installation

Product check

• Inspect all planks for visible defects and damage before and during installation.
• Do not install damaged planks or panels with visible defects.
• During installation, inspect the groove area for any debris that may prevent proper assembly of planks.

Room check

• Determine in which direction the planks will be installed. To make the room appear larger or if installing in very small rooms or hallways, it is preferable to lay the planks parallel to the longest room dimension. Otherwise lay towards the main source of light.
• It is recommended that cabinets be installed before installing planks. However, if planks are installed prior to installing cabinets, the cabinets must be fastened or secured to the supporting wall. Do not fasten cabinets through the laminate flooring.
• Carefully measure the room to determine squareness and also to determine the width of the last row of planks. If the width of the last row of planks is less than 50 mm, excluding the tongue, the width of first row of planks will have to be cut accordingly.

SUBFLOOR PREPARATION

Tarkett Laminate Flooring may be installed over most types of subfloors and existing floors on all grade levels.

The subfloor must be structurally sound and free from movement. The subfloor must be clean, dry, level and free of any defects:
• Dry. The subfloor must be dry. Measure always with appropriate test instruments. Moisture content limits: moisture content of cement screed/concrete must be <2% CM (CM method) and of anhydrite cement floors (Calcium sulphate screed) <0.5% CM.
• Level. The subfloor must be levelled within 3 mm in 1 m - 1/4” in 8 ft. - (PN EN 13813/DIN 18560/DIN 1856-2) or 2 mm over 2 m. Smooth and level all irregularities with a hydraulic (portland) cement base patching and leveling compound.
• Free of any defect. Cross check old wood floors, nail/screw to eliminate squeaking. Brush or vacuum clean your floor before beginning installation.

Concrete
• Concrete subfloors shall be properly cured and allowed to dry for a minimum of 90 days before installation.

Wood
• Suspended wood subfloors shall have a minimum of 45 cm (18") of well-ventilated air space clearance above the ground.
• A vapour barrier shall not be installed over wooden floor/construction.
• Moisture content of wood subfloor shall not exceed 12%.

Existing Sheet and Tile Flooring
• Existing flooring must be fully adhered and in good condition.
• Existing floor must be in a single layer.
• Repair any damaged areas.

Carpeting
• Deep pile carpeting and padding must be removed before laying laminate flooring.
• Tarkett® Laminate Flooring may be installed over industrial direct glue carpeting (no padding) that is installed over wood subfloors only.
• Carpeting must be removed if installed over concrete.
• The use of a foam underlay is not recommended over carpet.

For T-Lock installation, see drawings 1, 2 and 3, page 10

Please visit our website to see our video demo.
1. Before installing the first row, the part of the groove profile which sticks out must be cut off.
2. First row: Please pay high attention to install the first row in straightness, which is very important. Start in a left-hand corner with the groove side against the wall and work towards the right. Press spacers between the floor and the wall to create an expansion gap of 8-10 mm.
3. Second plank, first row. Place it gently and tight to the short end of the first one. Fold the panel down in a single action movement. During the fold down, make sure the panels are tight against each other. Afterwards press or slightly knock at the short end just installed.
4. At the end of the row, turn the last board so that it lies tongue to tongue. Push the short end tightly against the wall. Mark where to cut with a pencil 8-10 mm from the previous board’s short end to allow for an expansion gap when the board is tapped into place.
5. First plank, second row. Start with the rest of the cut board from the first row. Ensure that all the short end joints are staggered from the short end joints of the other row by at least 30 cm.

**SPECIFIC INSTRUCTIONS**

- In areas where it is difficult to angle the planks into position, such as around door moldings, it is necessary to remove the lip on the groove edge of the planks of the last row installed. This is done by lightly sanding or planning off the lip. This will allow you to install the plank by laying it flat. Apply a thin bead of Tarkett D3 glue on top of the modified tongue and push the plank of the first row into position. Immediately wipe off any excess glue with a damp cloth.
- If you wish or need to remove the flooring, separate the whole row by carefully lifting up and slightly knocking just above the joint. Fold up and release the whole long side. Disassemble the panels by sliding horizontally (Do not fold up). If the long side of the board meets a pipe:
- Drill a hole with a diameter min. 16 mm greater than the pipe diameter to give an expansion gap around the pipe. Mark with a pencil where to saw. Saw off the bit which will fit behind the pipes, closest to the wall. Cut at an angle as shown in the picture. If the pipes are located along the short side of the floor, cut the board at a 90° angle straight through the holes.

**INSTALLATION STEP-BY-STEP**

- Before installing the first row, the part of the groove profile which sticks out must be cut off.
- First row: Please pay high attention to install the first row in straightness, which is very important. Start in a left-hand corner with the groove side against the wall and work towards the right. Press spacers between the floor and the wall to create an expansion gap of 8-10 mm.
- Second plank, first row. Place it gently and tight to the short end of the first one. Fold the panel down in a single action movement. During the fold down, make sure the panels are tight against each other. Afterwards press or slightly knock at the short end just installed.
- At the end of the row, turn the last board so that it lies tongue to tongue. Push the short end tightly against the wall. Mark where to cut with a pencil 8-10 mm from the previous board’s short end to allow for an expansion gap when the board is tapped into place.
- First plank, second row. Start with the rest of the cut board from the first row. Ensure that all the short end joints are staggered from the short end joints of the other row by at least 30 cm.

For T-Lock installation, see drawings 4 and 5, page 10

For T-Lock installation, see drawings 6 and 7, page 10
**MAINTENANCE**

**Easy to own**

The melamine top layer prevents the proliferation of germs and bacteria. The hard sealed surface is stain resistant and the tight locking system prevents dust and dirt from entering the seams.

- Clean regularly with a vacuum cleaner or dry mop. If needed, you can damp-mop your floor.
- Every two weeks use a cleaning solution suited to laminates, rinse the mop thoroughly, and dry-mop the floor when finished.
- Remove spots and stains immediately. Rub the stain with a clean, dry mop moistened with a dedicated cleaning agent. Never spray the cleaning agent directly onto the floor.
- Repair dents and scratches with the Tarkett repair kit.

- **STAINS**
  - Remove stains, spots, etc. as they occur. Rub the stain with a clean, dry mop moistened with a dedicated cleaning agent. Never spray any cleaning agent directly onto the floor. When using a solvent or concentrated cleaning solution, read the safety advice carefully!

<table>
<thead>
<tr>
<th>STAIN</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>RUBBER, PLASTIC, HEEL MARKS</td>
<td>Rub the mark with a dry cloth. Use acetone if needed. Once dry, brush it off with a white nylon pad.</td>
</tr>
<tr>
<td>BLOOD, URINE</td>
<td>Wipe the stain with a slightly damp cloth. If dry, rub it down with a dry nylon pad.</td>
</tr>
<tr>
<td>NAIL VARNISH, SHOE POLISH, PAINT, INK, LIPSTICK</td>
<td>Remove with a cloth soaked in acetone, nail-tar varnish solvent, paint thinner or vinegar essence.</td>
</tr>
<tr>
<td>FRUIT, MILK, BEER</td>
<td>Remove with an absorbent dry cloth. If dry, wipe down with a dedicated cleaning solution (ideally Tarkett Bioclean), then wipe dry.</td>
</tr>
<tr>
<td>CANDLE WAX, CHEWING-GUM</td>
<td>Once hardened, these should be removed with a blunt plastic scraper.</td>

**Bio clean**

Economical and effective general purpose cleaner, gentle on the skin. Biodegradable. Free from organic solvents, colouring agents and phosphates. Code: 8792120

**Repair kit**

A complete kit for repairing dents or scratches, in the unlikely event this should happen! Code: 8264000

**Disposal? Recycling?**

You can dispose of your laminate flooring in normal household waste, or disposal waste for large quantities. Laminate flooring can be reused or recycled as an energy source.

**After installation**

**FINISH**

- Remove the spacers from the perimeter of the room.
- Install transition reduction profiles where needed. Do not fasten them through the laminate flooring.
- Install skirtings. Make sure they are of sufficient size to cover the 8mm expansion gap.
- At all times, the recommended room relative humidity (RH) of 40-70% and temperature of 15-24°C should be kept. If necessary install a humidifier/dehumidifier to ensure the best climate for yourself, furniture and your floor.
T-Lock installation schemes

1. Align the boards with a gap of 8-10 mm.
2. Insert the lock into the adjacent board.
3. Press the lock firmly to ensure a tight fit.
4. Ensure there is a 3 cm gap on the long side.
5. Complete the installation by following the order of 1, 2, 3 in each step.
6. Repeat the process for the remaining boards.

[Diagram showing the steps in sequence]
