

### **DAY TO DAY CLEANING OR AS AND WHEN REQUIRED**

To help protect of your wallcovering from the effects of a build up of any soiling, it will be necessary when required to clean the surface with a simple application of a diluted neutral detergent (SYR Scrubclean) applied with a cloth or sponge.

If maintained correctly, the Tarkett material can maintain its appearance for many years after its warranty period.

### **PERIODIC CLEANING**

Occasionally wipe the surface of the material with a diluted solution of Novacross (mild solution 1:60, general solution 1:40, heavy solution 1:20) or equivalent. Allow this to stand for 3-5 minutes and then rub with a white mildly abrasive foam backed pad followed by a rinse with clean water.

The above acidic cleansing fluid is also a sanitising fluid, which has bactericidal properties as well as being a powerful cleanser and deodoriser/perfume. If a less deodorising product is preferred, Liquid 99 from the same manufacturer can be used as an alternative.

Novacross is manufactured by British Nova Works Ltd. Tel – 020 8574 6531.
